Polymorphic Crisis

The current economic crisis is still at the center of Academic discussions. To understand its causes and consequences, several aspects should be taken into account, ranging from the theory of financial markets to social science in general, including political and normative approaches. Such a multifocal perspective can be consistently provided only by involving a broad set of researchers within an unified product. This book has this precise scope. It systematizes the debate that the current crisis raised within the Department of Economics and Law of the University of Macerata.

Polymorphic Crisis
Readings on the Great Recession of the 21st century

edited by Roy Cerqueti

Roy Cerqueti (Ph.D) is associate professor of applied mathematics at the Department of Economics and Law of the University of Macerata. His research activity focuses on quantitative methods for economics and finance, operational research, dynamic optimization and stochastic calculus. He has published more than 50 papers, mainly in highly ranked international Journals, and he is Associate Editor of the Journal of Accounting, Finance and Economics. He acts as Reviewer for the American Mathematical Society and for more than 30 scientific Journals. He has been speaker in several international conferences.
