The language of business, economics and finance: A corpus-driven, analytical discourse approach

The language of business, economics and finance explores the discourse of economics and the way it is used and organized in the business section, and in the finance and economics section of The Economist. Gaballo brings together methodologies of critical discourse analysis, systemic functional linguistics and corpus linguistics allowing the texts to be explored from different perspectives while providing multiple insights. The theoretical underpinnings of this work involve the ideas of preeminent theorists such as Foucault, Fairclough, Halliday, and Sinclair.

The two sections of The Economist are investigated with a corpus-driven approach to the analysis of texts and from the ideational, interpersonal and textual viewpoints (i.e., in terms of content, the writer – audience relationship, and discourse organization).

The language of business, economics and finance will appeal to students and researchers of Applied Linguistics, English Language, and Business Studies.

Viviana Gaballo is Assistant Professor in English Language and Translation at the Department of Law, University of Macerata, Italy. She has published and presented papers at international conferences in areas related to Linguistics (Critical Discourse Analysis; Corpus Linguistics; linguistic variation; lexicography), Applied Linguistics (CLIL – Content and Language Integrated Learning; CMC – Computer-Mediated Communication; teaching and learning with new technologies) and Translation Studies (translation competence; collaborative translation; translation of specialized texts; transcreation).

She is the author of the Systemic-Functional Translation Competence model, introduced in English in Translation Studies: Methodological Perspectives (EUM, 2009).
